

50% LESS EFFORT, 2X ACCURACY WITH CONTRACT AI

RAG, NLP & COMPUTER VISION UNLOCKING CONTRACT INTELLIGENCE

AI-Powered Contract & Document Intelligence | Enterprise SaaS

INFLECTION POINT

- Legal and operational contracts came in varied formats | Hidden clauses, obligations, and risk indicators required intense manual review, making it impossible to scale without intelligent extraction
- Critical tabular data trapped in scanned PDFs with merged and irregular layouts | Traditional rule-based extraction broke down across inconsistent document types, causing errors and delays
- Teams bogged down in repetitive copying, pasting, and cross-checking | Valuable time drained away from strategic decision-making and execution

EXIQO™ ENGINEERED FIX

OptimaAI Platform: Computer Vision and OCR extracted structured tables from scanned PDFs with merged and irregular cells, and AI models preserved table logic across all document formats, eliminating manual data capture

Context Engineering: RAG converted contracts into searchable embeddings, enabling natural language queries, precise clause extraction, and risk scoring without requiring legal specialists for routine review

AI SDLC Playbook: Advanced NLP identified key entities, obligations, rights, and compliance terms across contracts, surfacing what mattered instantly and delivering up to 75% accuracy improvement over manual review

AI-EV Program: Interactive dashboards with compliance flags, risk profiles, and KPIs, with structured outputs integrated directly into CRMs and legal systems, eliminating copy-paste workflows entirely

50%

reduction in document processing time across legal and service operations

75%

accuracy improvement in data extraction across scanned PDFs and irregular formats

2x

review accuracy improvement, with AI reading enhancing manual review
